SAFCO®

Personal Computer Cabinet

The compact computer work cabinet for your personal computer

SAFCO®

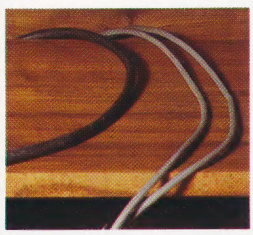
Personal Computer Cabinet

Open, Safco's Personal Computer Cabinet offers spacious working area plus generous storage capacity. When closed, this unique work station saves more precious space than conventional computer desks. Great for work at home, schools, in limited-area shops and retail stores, even in executive offices.

Placement of the monitor, keyboard and copyholder are designed for comfort and practical working position. When the cabinet doors are open, the hinged top folds down to support keyboard...simply slide it forward to working position. The upper disc drive shelf adjusts to accommodate various keyboard heights, or can be removed completely. The monitor is supported on the top shelf at eye level, and stored below when not in use. And a copyholder is included to be hung over either door at a convenient viewing level.

Because the cabinet doors lock, information is kept secure and protected from accidental destruction when equipment is not in use. Ideal for use with IBM, Tandy, Apple and Commodore home computers. The distinctive Hickory woodgrain finish inside and out complements your decor. And a durable vinyl coating resists scuffs, stains and mars. Shipped unassembled. Safco's Personal Computer Cabinet sets up easily with a screwdriver.

Built-in lock keeps equipment and information secure from accidental destruction or misuse



Disc drive shelf has ½" space in back to provide proper air flow for keyboard, plus extra cord space

Hickory woodgrain finish inside and out has a strong vinyl coating that protects the finish from scratches and mars

Personal Computer Cabinet features:

- Hinged top folds down to form 27" high surface for keyboard
- Monitor sits at eye level on the top shelf and tucks below for storage
- Disc drive shelf is adjustable for different keyboard heights or can be removed completely and placed in lower shelf position
- Disc drive shelf has ½" space in back for proper air flow and cord clearance
- Power cords are routed through a cord cutout in back of the cabinet
- Copyholder hooks over either cabinet door at a comfortable viewing level
- Cabinet doors lock so equipment and information are secure from accidental destruction when not in use
- Closed, the Computer Cabinet takes up less than 4 square feet of floor space
